

REPORT

ASSESSMENT OF FOOD DISPOSAL OPTIONS IN MULTI-UNIT DWELLINGS IN SYDNEY

**Prepared for:
In-Sink-Erator**

**December 2000
Document: 2883R**

Recipients of this document who seek to rely on it for any purpose, or who are considering an investment in and/or a commercial risk exposure to In-Sink-Erator should obtain independent advice and perform their own independent due diligence.

1 Acknowledgments

In undertaking this study, the investigators received support and assistance from numerous people and organisations that provided information and data.

We wish to thank Sydney Water personnel for the extensive information they provided as part of this study, in particular John Nieuwland, Phil Evans, Andrew Kasmarik and Mark McGowan.

The study was overseen by a steering committee which consisted of representatives from the NSW Environmental Protection Authority (EPA), Sydney Water, the NSW Waste Boards, Nature Conservation Council, Local Government and Shires Association and In-Sink-Erator. The project definition and methodology, together with the wording in this report, were developed in consultation with the committee, however this report does not necessarily represent the endorsed view of any of these organisations.

Assistance from Vivienne Underwood and Bruce Davis with proof-reading is gratefully acknowledged.
